Assignment 4: KD-trees a la Mondrian self-report

TEAM:

1. List the initializers that you integrated in your code (and, did you post an initializer to Slack?)

2. List the initializers and the values of n for which your code is working .

3. List the initializers and the values of n for which your code is crashing .

3. How did your prediction for how long this assignment would take, compare to the actual time it took? What caused this difference?

4. What challenges did you have with this lab? What have you learnt?

5. Do you have any suggestions on how to improve the assignment (to avoid these issues)?

5. Please rate the difficulty of this lab, from 1 to 10, with 10 being hardest.

4. What's your favorite lab so far?
